

Potassium Chloride (KCl/MOP) -Red Granular

Potassium (K) fertilizers are commonly used to overcome plant deficiencies. Where soils cannot supply the amount of K required by crops, farmers must supplement this essential plant nutrient. Potash is a general term used to describe a variety of K-containing agricultural fertilizers. Potassium chloride (KCl) Red granular MOP is used for producing compound NPK fertilizers and as a direct-application fertilizer. Red Granular MOP is used as a direct-application fertilizer and as a component of blended fertilizers potassium hydroxide (KOH), and for other industrial purposes. Color of MOP, May often varies from red/pink to white and it's often used in various fertilizer applications

Component	Typical %
Potassium Chloride (KCl)	95.5%
In terms of K ₂ O	60.4%
In Terms of K	50.10%
Sodium Chloride (NaCl)	2.5
In Terms of Na	1.0
Magnesium (Mg)	0.15
Calcium (Ca)	0.02
Insoluble in water	0.35
Moisture	0.5
Anticaking Agent	Added
Granulometry (Typical)	
Uniformity Index	54
Size Guide Number (SGN)	300
Physical Properties	
Bulk Density	Angle of repose
1000-1100 kg/m ³	26-40 °

Packing

Shipped in 1000 kg Jumbo bags or 50 kg small bags or in covered self-unloading hoppers.

Storage

Store inside, away from rain and heat. The hygroscopic nature of most water-soluble fertilizers requires extreme care to limit product exposure to moist and/or humid conditions. Pressure setting can also occur when these products are stored/stacked in multiple layers. Pressure setting and/or caking only influences the free-flowing nature of the product but does not bear any negative impact on the product's specifications or performance.
